EDUCATION

University of British Columbia, BSc in Computer Science

Sept 2021 - May 2025

Relevant Coursework: Statistics, Advanced Machine Learning, Relational Databases, Financial Accounting, Quantitative Economic Modelling with Data Science Applications

Honours: Undergraduate Open Scholarship, President's Honour Roll, Dean's Honour List

EXPERIENCE

DevOps Engineer Intern — Invoke, Vancouver, BC

Sept 2023 – Dec 2023

- Cut mobile release cycle 6x (60 min to 10 min) by building a Fastlane and CircleCI pipeline for iOS builds, code signing, and App Store deployment
- Shipped production OAuth for Google, Facebook, and Apple using AWS Cognito across a React Native client and Node.js API
- Provisioned AWS infrastructure with Terraform and cut CI runtime by parallelizing tests and optimizing Docker layer caching

Technologies: TypeScript, React Native, AWS, Terraform, Docker, Fastlane, CircleCI

PROJECTS

Parts Search for Collision Shops [getboneyard.com]

- Modeled a PostgreSQL parts graph normalizing OEM, aftermarket, and interchange IDs so one part number or VIN returns matching listings across every supplier
- Cut per page database operations from about 3,500 to about 25 through batched reads and in memory classification, fitting catalog sync inside a 12 minute processing window

Technologies: TypeScript, PostgreSQL, SQL, AWS Lambda, Terraform

Credit Default Prediction

- Built an end to end default classifier on 30,000 credit card clients, comparing logistic regression, SVM, random forest, and XGBoost after cleaning and engineering features
- Reached 81% test accuracy with a random forest against a 78% majority class baseline, then traced a 99% train score to overfitting and used RFECV to cut redundant features

Technologies: Python, pandas, scikit-learn, XGBoost, matplotlib

BC COVID and Census Analysis

- Analyzed about 85,000 daily COVID case records across British Columbia health regions, finding Northern Health's October 2021 peak of 136 cases per 100,000 people
- Joined census data with population weights to rank provinces by college attainment, from Ontario at 32% down to Nunavut at 14%

Technologies: Python, pandas, NumPy, matplotlib

SKILLS

Languages: Python, SQL, TypeScript, Bash

Analysis: pandas, NumPy, scikit-learn, matplotlib, EDA, cross validation, feature engineering

Data & Cloud: PostgreSQL, AWS (Lambda, S3, RDS), Terraform, GitHub Actions
